Lecture 25 — Load Testing

Jeff Zarnett jzarnett@uwaterloo.ca

Department of Electrical and Computer Engineering University of Waterloo

July 21, 2024

ECE 459 Winter 2024 1/27

From Observation to Load Testing

We talked about observability, but we want to also talk about scalability.

Goal: scale number of users,

$$1 \rightarrow 100 \rightarrow 10000000.$$

"In the midnight hour, she cries 'more, more, more" - Billy Idol

ECE 459 Winter 2024 2/27

Not Hypothetical

CFO: Can this system handle $10 \times$ as many users as we have now?

My answer has to have numbers. Analysis and load testing.

ECE 459 Winter 2024 3/27

Start With Why

Why are we doing this?

- A new system is being developed limits & risks
- Workload increase; can we handle it?
- A sudden spike in workload is expected
- Uptime requirements: 99.99%
- Plan has checkbox "performance testing"

ECE 459 Winter 2024 4/27

Reasons Why

Each implies a slightly different kind of testing.

- New system: average workload (plus buffer)
- Workload: what's our bottleneck?
- Spike: how to simulate it?
- Uptime: endurance!

(We'll ignore the last reason)

ECE 459 Winter 2024 5/27

Load testing is not the same as stress testing.

We're not going into it, but you can apply load testing strategies turned up to the max to get stress test results.

ECE 459 Winter 2024 6/27

Making the Plan

Let's make a test plan! Need answers to textitwho, what, where, when, & why.

We already covered why and that tells us about what.

Who? We will!

When? Now!

ECE 459 Winter 2024 7/27

Plan Signoff

How detailed the plan needs to be is going to depend on your organization, and the same applies for how many sign-offs (if any!) you need on the plan.

... let's not get sidetracked.

ECE 459 Winter 2024 8 / 27

What Do We Need?

What will be tested?

How will it be tested?

How do we know if the test is passed?

ECE 459 Winter 2024 9/27

What Workflows To Test

We cannot test everything; cost & effort are too high.

Do we already know what the rate-limiting steps are?

Maybe need to add observability first to identify those.

ECE 459 Winter 2024 10 / 27

Excuse Me, I'm New Here

What if it's a new system?

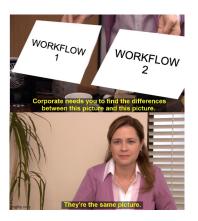

Critical is determined by product requirements:

- Computationally intensive work?
- User experience?
- External timing requirements?

ECE 459 Winter 2024 11/27

Other Load Scenarios

If utilization is low it might not be clear what the bottlenecks are. Might need to guess and revise those later.

If it's uptime requirements, we need endurance tests. We'll come back to those.

ECE 459 Winter 2024 12 / 27

How to Test Them

Might need to provision additional (virtual) hardware.

Regular testing tools might not be correct; may need a script.

Dev and production aren't the same, but how do they differ?

ECE 459 Winter 2024 13/27

Maybe Don't Do This

... Not quite what I mean.

ECE 459 Winter 2024 14/27

Hardware Principle

Scalability testing \neq QA testing.

Dev + QA on local computer. Your concerns: Is it right? Is it fast enough?

Fine, but it's no way to test if it scales.

ECE 459 Winter 2024 15/27

Hardware Principle

Test on prod-like machines: low-end systems have very different limiting factors.

Your laptop: limited by 16GB of RAM.

Prod server: 128GB of RAM.

So you might spend a great deal of time worrying about RAM usage and it just doesn't matter.

ECE 459 Winter 2024 16/27

Reality Principle

A QA engineer walks into a bar. Orders a beer. Orders 0 beers. Orders 9999999999 beers. Orders a lizard. Orders -1 beers. Orders a ueicbksjdhd.

First real customer walks in and asks where the bathroom is. The bar bursts into flames, killing everyone.

1:21 PM · 30 Nov 18

Quality Assurance

ECE 459 Winter 2024 17/27

Reality Principle

Use a "real" workload.

Maybe not actual live customer data, but try to come close.

Limited test data/scenarios \Rightarrow inaccurate test results.

Your tests run summary reports occasionally... your users might run them every hour.

ECE 459 Winter 2024 18/27

Volume Principle

"More is the new more."

Lighter workloads OK for regression testing.

To see how your system performs under pressure, you actually need to put it under pressure.

Can simulate pressure by limiting RAM or running something very CPU-intensive concurrently, but it's just not the same.

ECE 459 Winter 2024 19/27

Reproducibility and Regression Testing

Science rule 1: results need to be reproducible!

There is likely some variance in runs during load testing due to the natural randomness of the OS, scheduler, luck, etc.

ECE 459 Winter 2024 20 / 27

Endurance Tests – How Long?

You're familiar with the idea that endurance is different from peak workload.

Starting your day with an early morning run is a great way to make sure your day can't get any worse than it started

ECE 459 Winter 2024 21/27

Let's Go For A Run

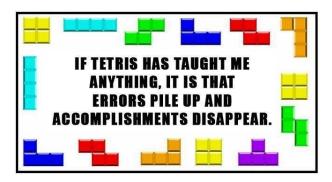

Can I [JZ] run at 10 km/h for...

- 1 minute? Yes, of course!
- 30 minutes (5 km)? Yes!
- 60 minutes (10 km)? Yes (with difficulty).
- 4 hours (40 km)? No.

But if we just observed my running for 15 minutes, we might conclude I could run at 10 km/h indefinitely, but that's not true.

ECE 459 Winter 2024 22 / 27

Cumulative Negative Effects

If our sample period is 15 minutes, it's not long enough to reflect the cumulative negative effects that contribute to my slowing down and being forced to stop.

ECE 459 Winter 2024 23 / 27

Wait, CPUs Don't Get Tired

Their parts accumulate fatigue, but not at the rate of a runner's muscles.

Yes, it's still a valid analogy. Consider a program that has a data hoarding issue.

ECE 459 Winter 2024 24/27

One outcome: java.lang.OutOfMemoryError: Java heap space

Same for filling up disk, exhausting file handles, log length.

Another example: holiday code freeze as unintentional endurance test.

ECE 459 Winter 2024 25 / 27

Okay, But How Long?

Is 30 minutes of running the right amount? 3 hours?

Maybe it's product requirements again: e-commerce on Black Friday?

What about the maintenance window?

No easy answers.

ECE 459 Winter 2024 26 / 27

Evaluating Success

ECE 459 Winter 2024 27/27
